Lessons Learned Log

Purpos

To be a repository of any lessons learned during the project that can be usefully applied to this or other projects/programmes. This should be an ongoing log setup at the start of the project that is updated regularly, or at least at the end of each phase. Sensibly a note should be made in it of any good or bad point that arises in the use of the management and specialist products and tools at the time of the experience. At the close of the project it is written up formally in the Lessons Learned Report.

Advice

Information for recording in the Lessons Learned Log is derived from observation and experiences of the processes, the Quality Log, the Risk Log, Highlight Reports and Project Plans with actuals.

The following quality criteria apply:

- Each management control has been considered
- The reasons for all tolerance deviations and corrective actions have been recorded
- Input to the log is being done regularly, at least at the end of each stage
- Project Assurance have been asked for their input
- Statistics of the success of any quality reviews and other types of test used are included
