All coffins will arrive via Chapel prior to Cremation and no coffin shall be cremated after being directly received through the Chapel of Rest Doors without entering Chapel beforehand.

IDENTIFICATION

58. The body of a person shall not be accepted at the Crematorium unless it is enclosed in a coffin bearing a nameplate establishing the identity of the body contained therein. 59.. Rings, jewellery and personal items, on or about the body must be removed before the coffin is sealed (except wedding rings) and the Joint Committee shall not be liable to account for such articles after Cremation has taken place. The Crematorium participates in the ICCM Metal Recycling Scheme with the proceeds of the recycling donated to bereavement related charities nominated by the Joint Committee annually.

CONSTRUCTION OF THE COFFIN

60. The construction of coffins should comply with the current specification issued by the National Association of Funeral Directors and Funeral Furnishings Manufacturers' Association. The coffin must be made of easily combustible material, wood or wood derivatives, which when placed in a cremator and subjected to the accepted cremation process, is easily combustible and which does not emit smoke, give off toxic gas or leave any retardant smears or drips after final combustion. Ecologically friendly coffins will be permitted. Resinous or badly seasoned wood must not be used in the construction of coffins. No metal furniture or fittings whatever shall be used on a coffin for cremation; and no metal shall be used in the manufacture of such coffins except as is necessary for its safe construction, and then only metal of a high ferrous content. Hardwood plugs should be used whenever possible. Plastic handles and fittings are permitted if they are made from a base material of polypropylene. Products manufactured in polyvinylchloride (PVC), polystyrene, melamine or other plastic materials are not acceptable in the construction of the coffin or its furnishings. The nameplate may be of polystyrene and must not weigh more than 90 gms. (ideally the nameplate will be manufactured from solid wood). There must be no crosspieces or fittings attached to the bottom of the coffin. If it is desired to strengthen the base of the coffin, wooden strips may be placed lengthways for this purpose. The coffin must not be painted or varnished, but may be covered with a suitably coloured cloth. The Joint Committee will refuse to accept uncoffined corpses for cremation.

61. If a coffin is brought to the crematorium, which, due to its poor construction is unsuitable or odoriferous, it will be allowed into the Chapel at the discretion of the Manager. A coffin leaking body fluids will not be allowed into the Chapel under any circumstances.

CLOTHING

62. Any material, which is likely to give rise to the emission of smoke, odours, toxic gases or other harmful pollutants during the cremation process, must not be placed in a coffin. The coffin must not contain items of clothing, footwear or personal items liable to produce undesirable or toxic emissions or containing any polyvinylchloride (PVC) or any form of residual chlorine. Where the deceased is dressed in personal clothing, the minimum of clothing should be used and cotton should be the preferred material.

LINING OF THE COFFIN

63. The use of sawdust, wood shavings, cotton wool or folded paper must be avoided. Wadding, side linings and gowns should be of cellulose based fibre. The use of polyester or acrylic fibres should be avoided where possible. If circumstances require, suitable sealing materials may be used, but no metal or rubber will be allowed and on no account must polyvinylchloride, pitch or similar bituminous substances be used. Plastic linings must be of polyethylene (Cremfilm). Packaging for still birth, neonatal and foetal remains shall not include chlorinated plastics. Lead, zinc or other metal linings are not permitted. All coffins will need to be constructed to satisfy the Health and Safety at Work etc. Act 1974 and the Pollution Prevention and Control Act 1999. This regulation does not preclude the use by Health Authorities of sealed transportation bags, which may be left in the coffin for hygiene or public health reasons.

HAZARDOUS IMPLANTS

64. Hazardous implants are those that have an explosive or radioactive capacity and must be removed before cremation. Pacemakers, for example, can cause an explosion if left in a body brought for cremation. Radioactive implants pose a health hazard. Cremation will be refused if such devices are not removed.

SIZE OF THE COFFIN

65. The maximum external dimensions permitted for coffins are:

Length: 7 ft.	Width: 3 ft. (36")	Depth: 1 ft. 10 ins.

COLLECTION OF CREMATED REMAINS

69. The Joint Committee will require a receipt to be signed if the cremated remains are removed from the Crematorium, and the person signing shall state how the cremated remains are to be disposed of. Cremated remains may not be removed from the Crematorium unless they are contained in either a suitable and secure urn or casket supplied by the Joint Committee, or such other containers the Manager considers appropriate for that purpose. A Certificate for Burial of Cremated Remains should be obtained from the Manager if it is intended to bury the cremated remains elsewhere. Where the Applicant for Cremation elects to have the cremated remains strewn in the Garden of Remembrance or Woodland Walk, the remains will be held in storage for at least 14 days following the cremation, to allow time for reconsideration.

STORAGE OF CREMATED REMAINS

71. Unless the relatives give other instructions, cremated remains will be sealed in a simple urn and may be retained free of charge at the Crematorium for a period not exceeding three months. A notification will then be sent by post to the Applicant for Cremation at the address held by the Crematorium requesting instructions. In the absence of specific instructions, after the expiration of a further 14 days, the cremated remains will be strewn in the Garden of Remembrance. The Joint Committee will not be held responsible for ensuring that the Applicant for Cremation has received the notification referred to above. Where the cremated remains are stored within a Pond Marker or Sanctum, a notification will be sent to the applicant for the adoption within 3 months of expiry of the adoption period requesting further instructions. If no further instruction is received within 30 days, then the cremated remains will be strewn in the Garden of Remembrance. The Joint Committee will not be held responsible for ensuring that the Applicant for Cremation has received the notification referred to above

URNS AND CASKETS

72. Specimens of urns of various designs may be seen on application to the Manager, and may be purchased from the Joint Committee. All urns/caskets containing cremated remains released from the Crematorium shall bear a nameplate or label to identify the name of the deceased. The Joint Committee will take all reasonable steps to safeguard urns and containers but cannot be held responsible for any loss or damage. The Crematorium staff will not divide cremated remains in any way. The removal of "token" cremated remains should be carried out by the Applicant for Cremation or Funeral Director.
